

Software Requirements Specification

Amazing Lunch Indicator

Table of Contents

1. Introduction.....

1. Introduction

This section gives a scope description and overview of everything included in this SRS document. Also, the purpose for this document is described and a list of abbreviations and definitions is provided.

1.1 Purpose

The purpose of this document is to give a detailed description of the system and its requirements.

GPS

and admin

2. Overall description

This se

ocr"xkgy" k " S c (g (c k " " " k " " T

would mean the integration with the GPS would have different requirements than what is stated in this specification.

2.6 Apportioning of requirements

3. Specific requirements

This section contains all of the functional and quality requirements of the system. It gives a detailed description of the system and all its features.

3.1 External interface Requirements

This section provides a detailed description of all inputs into and outputs from the system. It also gives a description of the hardware, software and communication interfaces and provides basic prototypes of the user interface.

3.1.1 User interfaces

A first-time user of the mobile application should see the log-in page when he/she opens the application, see Figure 2. If the user has not registered, he/she should be able to do that on the log-in page.

If the user is not a first time user, he/she should be able to see the seach page directly when the

The restaurant owners and administrators interact with the system through a web-portal, see Figure 8. Ai

abo

3.2.1.8 Functional requirement 1.8

ID: FR8

TITLE: Mobile application - Search result in a list view

DESC:

Search results can be viewed in a list. Each element in the list represents a specific restaurant. Each element should include the restaurant name, telephone number, type of food, distance, a line description, a link to the page and an information link.

There should be maximally 100 results displayed. If the result contains more restaurants than what can be displayed on the screen at one time, the user should be able to scroll through them.

When searching by price the restaurants should be sorted according to the following order:

1. average price
2. distance
3. restaurant type
4. specific dish

RAT: In order for a user to switch between result views.

DEP: FR7, FR8

3.2.1.11 Functional requirement 1.11

ID: FR11

TITLE: Mobile application - Selecting the information link

DESC: A user should be able to select the information link, which is included on all result items. The link will direct the user to an information page, which includes picture of the restaurant, the restaurant name, address, phone number, e-mail address, type of food, average price, restaurant description and a menu with name, description and price of the different dishes.

RAT: In order to show information about the restaurants.

DEP: FR7, FR8

3.2.1.12 Functional requirement 1.12

ID: FR12

TITLE: Mobile application - Search by price

When the sort button for a s

3.2.3 User Class 3 - Administrator

3.2.3.1 Functional requirement 3.1

ID: FR26

Feature: Administrator log in

In order to administer the system

An administrator

Should be logged in to the web-portal

Scenario: Successful log-in

Given the administrator wants to log in

When the administrator logs in with a(n)-2(dm)17(i)-4(ni)6(st)4(r)-3(at)5(or)-3(a)9(cc)-2(oun)11(t)] TETBT/Fstrator

Then then dministrator should be logged in as a(n)8(dm)17(i)-4(ni)-4(s)9(t)-4(r)-3(a)9(t)-4(or)] TETBT/Fstrator lo

3.2.3.2 Functional requirement 3.2

ID: FR27

When the administrator deletes an existing restaurant owner
 Then the restaurant owner should be deleted
 And the restaurant information should be deleted

3.2.3.8 Functional requirement 3.8

ID: FR33

Feature: Administrator - Selecting preferred language on the web-portal

In order to ensure that the administrator can select a preferred language TETBT1 0 0 1 206.81 601.54 Tm[(-)] TETBT1 0 0 1 210.29 601.5

Given the administrator wants to select a preferred language
 When the administrator selects English (as a native language) TETBT/F2 13.56 T

Given the administrator wants to select a preferred language[()] TETBT/F2 11.04 Tf1 0 0 1 100.50.55 Tr

guage

3.3.2 Usage of the search feature

ID: QR2

TITLE: Usage of the search feature

DESC: The different search options should be evident, simple and easy to understand.

3.3.7 System dependability

ID: QR8

TAG: SystemDependability

GIST: The fault tolerance of the system.

SCALE: If the system loses the connection to the Internet or to the GPS device or the system gets some strange input, the user should be informed.

METER: Measurements obtained from 1000 hours of usage during testing.

MUST: 100% of the time.

3.4 Design constraints

This section includes the design constraint on the software caused by the hardware.

3.4.1 Hard drive space

ID: QR10

TAG: Hard drive space

SCALE: If a restaurant owner tries to log in to the web portal with a non-existing account then the restaurant owner should not be logged in. The restaurant owner should be notified about log-in failure.
METER: 1000 attempts to log-in with a non-existing user account during testing.
MUST: 100% of the time.

ID: QR14

TAG: AdminLoginAccountSecurity

GIST: Security of accounts.

SCALE: If an admin tries to log in to the web portal with a non-existing account

The second release also includes important requirements. However, these requirements are not vital for a functional application. They are more suited to act as additional features that can contribute to making the software product more attractive.

The third release includes the requirements that can be afforded to discard if the project gets delayed or overruns the budget.
